

# TANA L-1

The TANA L-1 is an add-on wireless active loudspeaker. It can be used to enhance the other models and create a HiFi or home cinema system.

It is really not just a loudspeaker. It is the result of mixing timeless Scandinavian design with forty years of experience and technology in pursuit of perfect music reproduction. It is staying true to our principles and philosophies. Where many other compact systems use electronic Class-D amplifiers and simple equalizers, we make use of analog Class-AB amplifiers and sophisticated signal processing. In the end, music really matters.

## SPECIFICATIONS
